## HEATING SOLUTIONS

CODE OF CONDUCT

Thermo-Floor AS has prepared a code of conduct for corporate social responsibility and ethics that all our suppliers and distributors must sign.

This Code is based on the principles of ISO 26000:2010 "Social responsibility", as well as applicable human rights conventions implemented in Norwegian law.

Our code contains, among other things, points regarding:

- Child labor, forced labor and slave labor
- Corruption
- Human rights
- Basic working conditions
- Organizational law
- Environmental considerations
- Health and safety

 Conformité Européenne (CE) CE marking of a product means that it complies with the regulations and legal requirements imposed on the product through the EEA and can therefore be sold in Europe.

 The Nemko mark is proof of compliance with relevant safety and EMC standards in Norway.

 The Eurasian Conformity Mark (EAC) is a certification mark to indicate that products conform to all technical regulations of the Eurasian Customs Union.

 WEEE is an EU directive which states that manufacturers of electrical and electronic products are responsible for the collection and recycling of the products when they are disposed of.

 Restriction of Hazardous Substances Directive - RoHS is an EU directive that prohibits cadmium, lead, mercury, hexavalent chromium, polybrominated biphenyls and polybrominated diphenyl ethers in certain types of electrical and electronic products

CERTIFICATIONS

We want to contribute to developing eco-friendly solutions, and our efforts have resulted in several certifications we can be proud of.

ISO CERTIFIED ISO 9001:2015 & ISO 14001:2015

Thermo-Floor AS is certified according to ISO 9001:2015 and ISO 14001:2015. Our guidelines for ethics and social responsibility are based on the principles of ISO 26000:2010

SUSTAINABILITY

Thermo-Floor AS works purposefully to be a positive force in the society around us and to contribute to innovation. We wish to contribute to sustainable social development and reduce the environmental impact associated with our activities. Our goal is to take care of the environment and people, while creating value, growth and innovation.

We have an internship program.

Heatit Controls AB / Thermo-Floor AS can not be held liable for typographical errors, other errors or omissions in our information.

All electrical installations must be carried out by a licensed electrician. The product must be installed in accordance with our installers manual or national building codes.

HEATIT CONTROLS

Heatit Controls AB offers an innovative range of heating control products, from basic thermostats, relays, switches and dimmers, to advanced solutions for smart homes. Almost all of our products use Z-Wave, the world's largest system of interoperable IOT products.

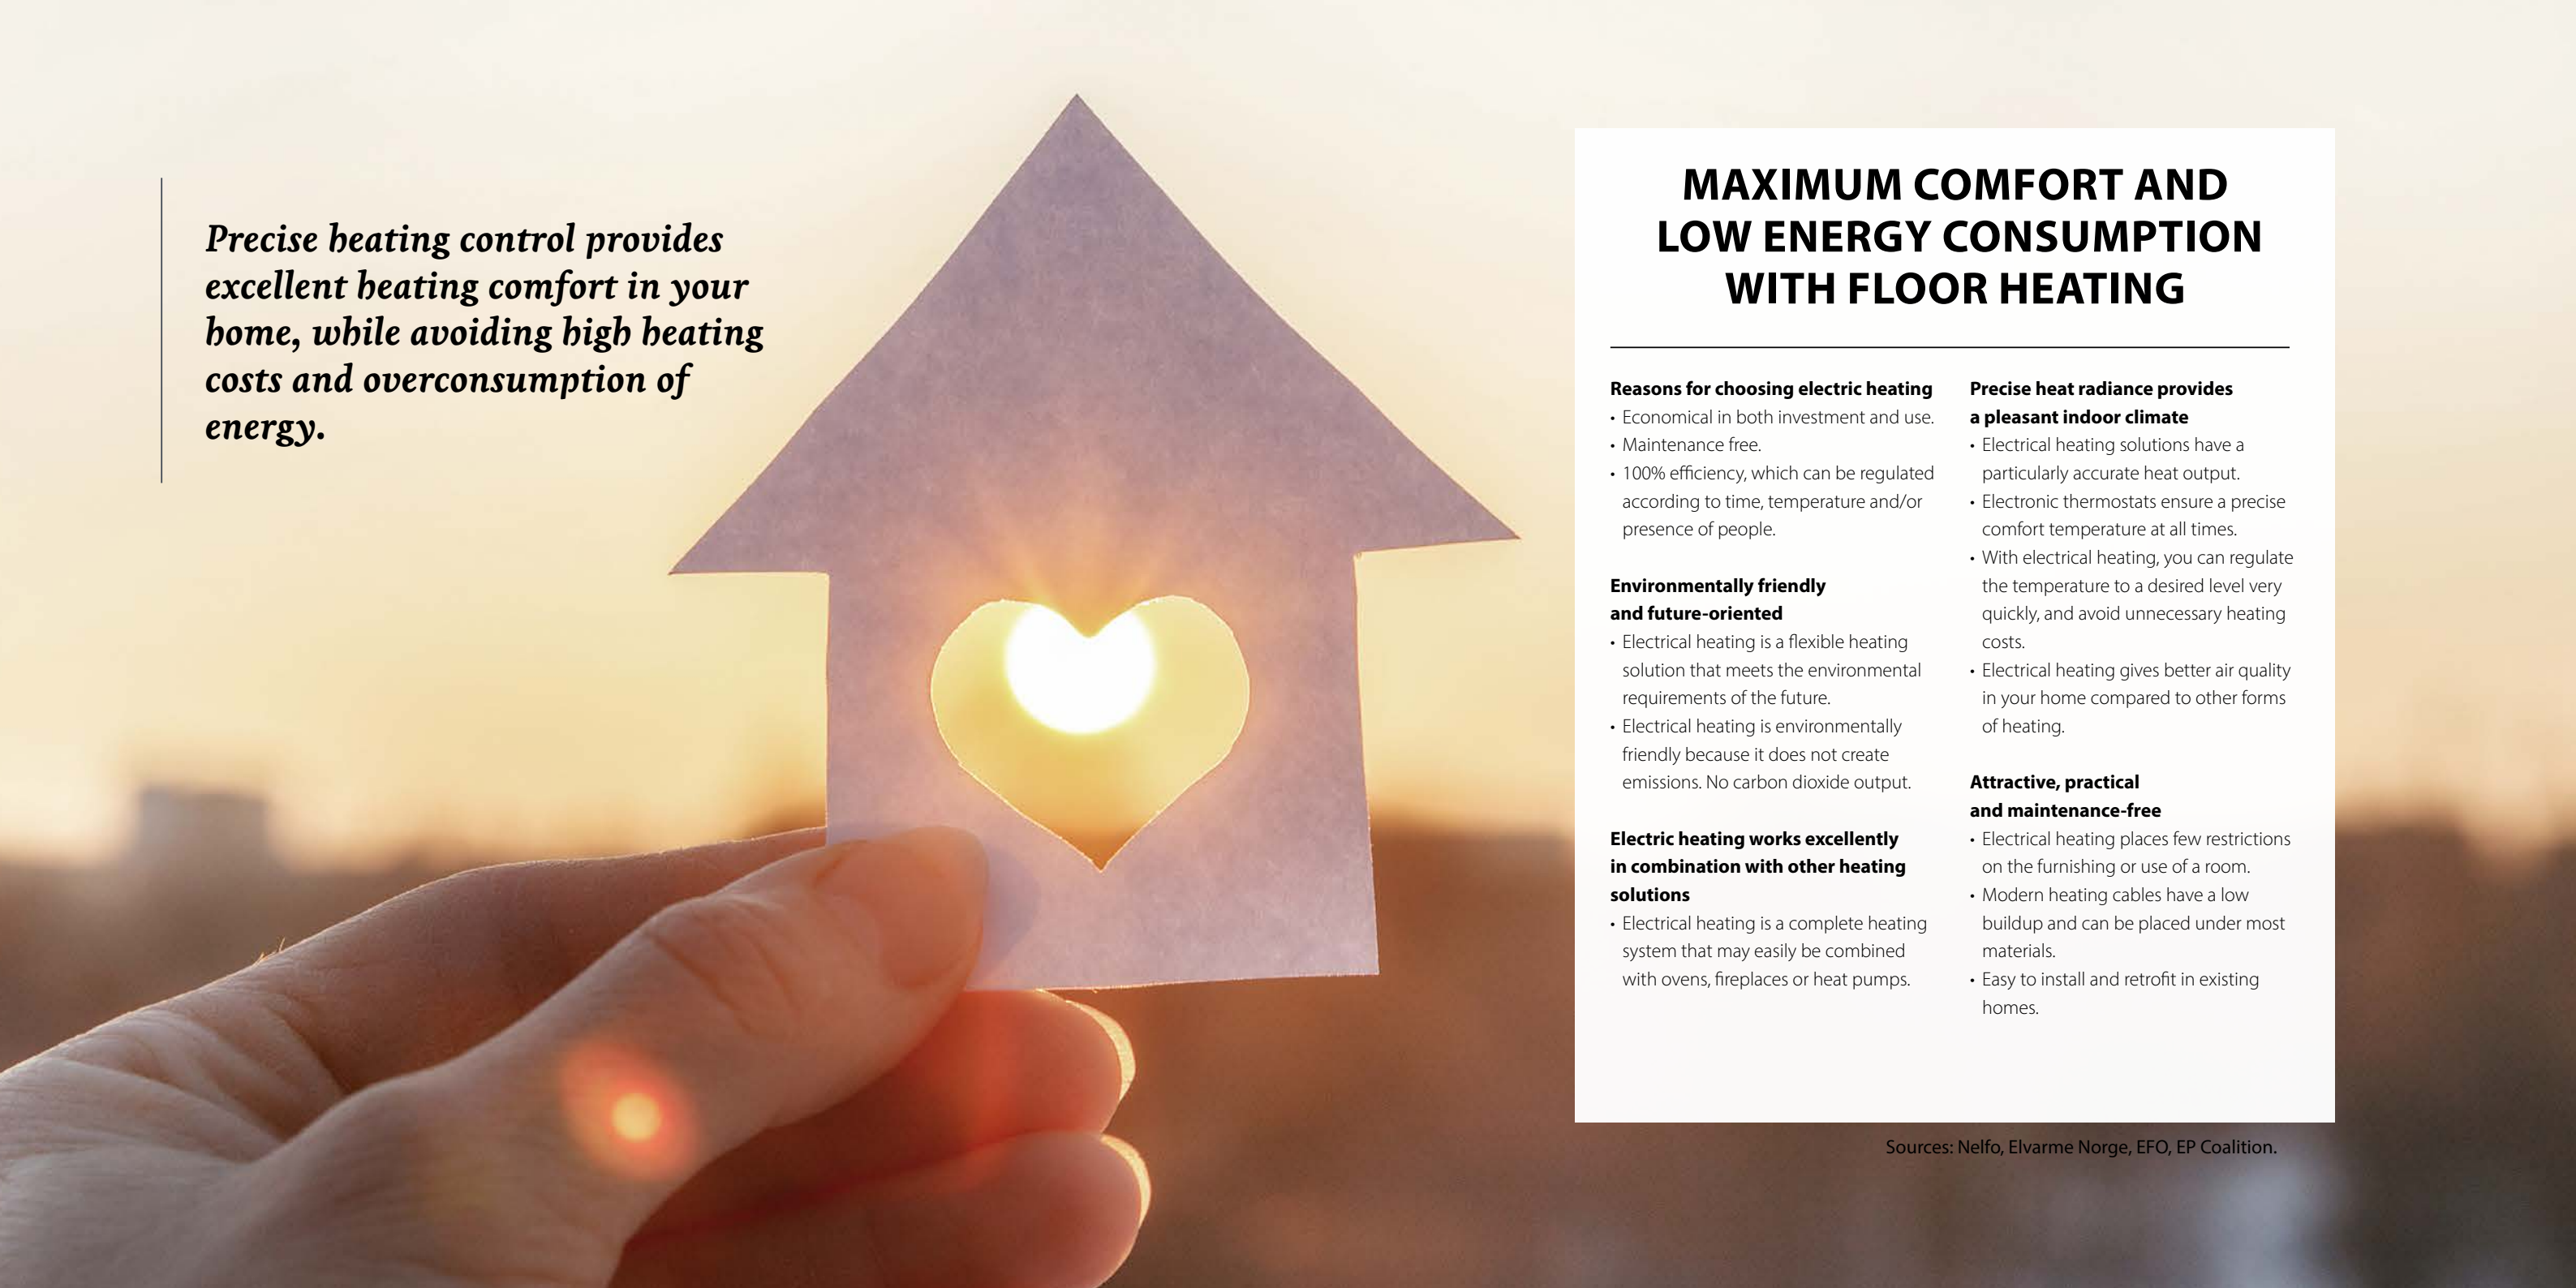

Heatit Controls AB is a sister company of Thermo-Floor AS in Norway. Thermo-Floor AS has operated in the floor heating market for more than 30 years and are continuously investing in new innovative products.

*Precise heating control provides excellent heating comfort in your home, while avoiding high heating costs and overconsumption of energy.*

## MAXIMUM COMFORT AND LOW ENERGY CONSUMPTION WITH FLOOR HEATING

### Reasons for choosing electric heating

- Economical in both investment and use.
- Maintenance free.
- 100% efficiency, which can be regulated according to time, temperature and/or presence of people.

### Environmentally friendly and future-oriented

- Electrical heating is a flexible heating solution that meets the environmental requirements of the future.
- Electrical heating is environmentally friendly because it does not create emissions. No carbon dioxide output.

### Electric heating works excellently in combination with other heating solutions

- Electrical heating is a complete heating system that may easily be combined with ovens, fireplaces or heat pumps.

### Precise heat radiance provides a pleasant indoor climate

- Electrical heating solutions have a particularly accurate heat output.
- Electronic thermostats ensure a precise comfort temperature at all times.
- With electrical heating, you can regulate the temperature to a desired level very quickly, and avoid unnecessary heating costs.
- Electrical heating gives better air quality in your home compared to other forms of heating.

### Attractive, practical and maintenance-free

- Electrical heating places few restrictions on the furnishing or use of a room.
- Modern heating cables have a low buildup and can be placed under most materials.
- Easy to install and retrofit in existing homes.

Sources: Nelfo, Elvarme Norge, EFO, EP Coalition.

## HEATING CONTROL

A thermostat makes sure that you always have the desired temperature in your room. It can be placed anywhere in the room and does not take up any space. We offer a wide range of thermostats from the simple versions with a floor sensor and a dial, to smart versions with power metering, OTA updates and remote access via a Z-Wave gateway. The choice is yours.

Consult your electrician

# MyHeatit

**Our new Wi-Fi products - both those launching now and coming later will all support our newly developed app - MyHeatit**

**The app contains functionality that enables you to control your smart home via WiFi or Bluetooth Low Energy (BLE).**

**Special for this app is its functionality in connection with installation. The installer can connect, include and organize your devices before the entire system can be easily transferred to the home owner.**

**In addition, of course, functions such as scenes, schedules, user management etc. will be an important part of the app. MyHeatit will also be connected to our own cloud solution Heatit Cloud2 for safe and easy handling of data, backup and functionality.**

**MyHeatit will be available for Android and for iOS during the ultimo 2023.**

Look for products marked with MyHeatit brand.

Heatit WiFi6 - Black Matt Art. no. 54 305 43

## HEATIT WIFI6

Heatit WiFi6 is an electronic thermostat designed for electrical heating. The thermostat can be controlled using the "MyHeatit" app via Wi-Fi, Bluetooth (BLE), or by the buttons in front of the thermostat. The thermostat has a user friendly interface.

Heatit WiFi6 has 3 modes; Heat, Cool and Eco.

The thermostat fits in standard European junction boxes and may be used with most System 55 frames. It has a sturdy metal frame for secure fastening on the junction box.

Heatit WiFi6 has power metering and it gives you the real time information about your power consumption.

Heatit WiFi Dim - White RAL 9003 Art. no. 14 444 70

Heatit WiFi Dim - White RAL 9010 Art. no. 14 444 71

## HEATIT WIFI DIM

Heatit WiFi Dim is a WiFi twist dimmer for many different types of light sources. The dimmer works on most low loads without causing flicker. Heatit WiFi Dim is suitable for use with LED lights.

The dimmer is controlled via the MyHeatit App via WiFi, Bluetooth (BLE), or from the turning wheel on the front of the dimmer.

The dimmer has the option of an external switch that allows you to dim and turn the light on/off.

Mounted in a standard wall box and fits into System 55 frames.

Heatit WiFi Dim has power metering and it gives you the real time information about your power consumption.

FUNCTIONS

- Wi-Fi/BLE thermostat
- Internal room sensor
- External room sensor (wired by cable)
- Floor sensor
- Power regulator
- Temperature limiter
- 3 modes; Heat - Cool and Eco
- Hystereses/PWM
- Temperature calibration
- Open window detection
- ZeroX-detection
- Relay status icon
- Adjustable display brightness
- Single pole switch
- Lock mode/child lock
- Google Home, Amazone Alexa and open API (pending)
- Weekly schedule
- Active power metering
- Firmware update (OTA)

TECHNICAL DATA

Protocol	Wi-Fi 2.4GHz/BLE
Rated voltage	230VAC 50Hz
Max load	3600W (resistive load)
Max current	16A
Power consumption	<2.0W
Ambient temperature	5°C to 40°C
Hysteresis	0.3°C to 3.0°C (default 0.5°C)
Humidity	10% to 85% RH
Compatible with NTC sensors with values	6.8, 10, 12, 15, 22, 33, 47 and 100kΩ @ 25°C
Product size (WxHxD)	84 x 84 x 45mm
IP Code	IP21
Approvals	CE, Nemko

# HEATIT WIFI6

Heatit WiFi6 is an electronic thermostat designed for electrical heating. The thermostat can be controlled using the "MyHeatit" app via Wi-Fi, Bluetooth (BLE), or by the buttons in front of the thermostat. The thermostat has a user friendly interface.

Heatit WiFi6 has 3 modes; Heat - Cool and Eco.

The thermostat fits in standard European junction boxes and may be used with most System 55 frames. It has a sturdy metal frame for secure fastening on the junction box. The thermostat has a built-in room temperature sensor. Two additional external temperature sensors may also be connected. The device has an open API and supports Amazon Alexa and Google Home (open API, Amazon Alexa and Google Home is pending).

Heatit WiFi6 has active power metering and it gives you real time information about your power consumption. It also allows you to set the power metering value manually in case of connection with a contactor.

## HEATIT WIFI

Heatit WiFi is an electronic thermostat for electrical underfloor heating. The thermostat has a simple user interface and can be easily programmed via the capacitive buttons. The thermostat has an easy user interface.

The thermostat fits in standard European wall box and can be used with most frames that are adapted to System 55. The thermostat has a builtin sensor and can be connected to two external sensors.

The thermostat has a built-in Wi-Fi that allows you to control it from a user-friendly app. The "Heatit WiFi" app is available on Google Play and in the App Store. Works with Amazon Alexa and Google Home. If you are installing multiple thermostats in the same house, you may copy the settings from one thermostat to the next. This simplifies the installation.

Heatit WiFi App

## HEATIT 7S NFC

Heatit 7S NFC is an electronic thermostat for electrical underfloor heating. The thermostat has three modes; Comfort, Eco and weekly program.

The thermostat fits in standard European wall boxes and can be used with most frames that are adapted to System 55. The thermostat has a built-in sensor and may be connected to two external sensors.

Heatit NFC Thermostat has a built-in NFC chip to control the thermostat via NFC app on your phone. All parameters can be configured from the app, and you can also set up weekly schedules via the app.

NFC

# MULTIREG6

Multireg6 is an electronic thermostat designed for electrical heating. The thermostat has a user friendly interface that can be controlled from the buttons on the front.

Multireg6 has 3 modes; Heat - Cool and Eco.

The thermostat fits in standard European junction boxes and may be used with most System 55 frames. It has a sturdy metal frame for secure fastening on the junction box. The thermostat has one built-in room temperature sensor. Two additional external temperature sensors may also be connected.

Multireg6 has active power metering and it allows the user to see the total accumulated energy consumption in kWh.

MULTI REG

### FUNCTIONS

# MULTIREG S-CONTROL

Multireg S-Control is an electronic thermostat with four functions. The thermostat is easy to install and program, and the design makes it very user-friendly. The thermostat has a setback temperature option.

Multireg S-Control is equipped with a 2-pole switch, and fits System 55 frames.

MULTIREG

**FUNCTIONS**

- Floor sensor
- Internal room sensor
- Power regulator
- Temperature limiter

# MULTIREG LCD3

Multireg LCD3 is an electronic thermostat designed for electrical heating. The thermostat fits in standard European junction boxes and may be used with most System 55 frames. Multireg LCD3 has the option of a weekly program. It has an internal sensor and can be connected to two external sensors.

Multireg LCD3 also has two modes for outdoor use. When using two sensors, it is possible to limit the ground temperature additionally. Multireg LCD3 is designed to melt snow and ice on the ground, stairs, and smaller outdoor areas. The thermostat operates within a specific temperature range.

# HEATIT EXTERNAL ROOM SENSOR

Heatit External Room Sensor is designed for use with Multireg- and Heatit thermostats. The sensor can be mounted directly on a wall or on top of a wall box. Fits into most System 55 frames. The product comes in a matte version.

When used with a thermostat, dimmer or other products that emit heat, it is recommended that the sensor be mounted below these other products.

It is not possible to connect the sensors in series or in parallel.

### FUNCTIONS

- External sensor
- Designed for use with Multireg- and Heatit thermostats
- Fits into combination frames
- Can be mounted directly on the wall or on top of a wall box
- Connected by cable to the thermostat
- For indoor use

# FLOOR HEATING

Electrical underfloor heating has incomparable energy efficiency, and at Thermo-Floor AS, we offer all types of solutions. Low-build electrical systems quickly heat up and cool down, and this makes electric underfloor heating a very energy-efficient solution. The heat rises evenly from the entire surface of the floor and prevents hot and cold zones in the room, which may be a problem when using radiators, convectors and heat pumps. Our bodies are designed to be most comfortable when our feet are warm and our heads cool. With heated floors, you may lower your indoor temperature a couple of degrees, thus saving energy without losing comfort. With state-of-the-art thermostats that control the heat in every room, you can create a warm environment for the whole family throughout your living space.

RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA.  
The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

AREAS OF USE

Comfort heating for all dry rooms indoors. Can be installed directly on wooden or concrete sub-flooring in combination with the 3mm TFP underlay.

FLOOR COVERING

- Parquet
- Laminate
- Chipboard

The mat is available in many sizes up to 15m<sup>2</sup>, and several mats may be connected to cover large areas.

An ideal product for parquet and laminate flooring

Advantage

- Very low buildup.
- Excellent heat distribution.
- Quick and simple installation.
- Retrofit friendly.

**Buildup** 4 - 4.5mm including underlay.

FOR PARQUET AND LAMINATE

ThermoFloor  
— smart heating solutions —

TECHNICAL DATA

Rated voltage	230VAC 50Hz
Output pr. m²	60W or 100W
Thickness	0.3mm
Widths	30cm + 50cm + 80cm + 100cm + 120cm
Length	50 - 100 meters depending on type
Approvals	CE

TF heating foil is a product with single layer insulation. In order to achieve double insulation, the foil needs to be covered with PE foil.

All concrete sub-floors or sub-floors on ground level must be covered by a 0,20mm PE plastic foil before installing the TF heating foil.

RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA.

The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

AREAS OF USE

Comfort heating and total heating for all dry rooms. TF heating foil is designed for use underneath parquet and laminate floors.

FLOOR COVERING

- Parquet
- Laminate
- Chipboard

**Buildup** The heating foil is approx. 0,3mm thick. TF heating foil in combination with TFV underlay has a buildup of about 6 - 7mm.

# TF HEATING FOIL

TF heating foil is an easy and cost-efficient underfloor heating system, whether you are building a new floor or refurbishing an old one. The heating foil is placed directly on heat-reflecting, insulating underlay, and may be covered by floating parquet or laminate flooring. We supply heating foil in various widths and effects. The heating foil is approximately 0,3mm thick. The buildup of the TF heating foil combined with the TFV underlay is no more than 6 - 7 mm. TF heating foil is made from eco-friendly materials, and it is easy to cut and splice according to your needs.

It takes very little time to heat up a room with this type of flooring. Using a thermostat with setback temperature helps you save money by reducing the heat at times when no one is at home, or at night.

## Heating foil for parquet and laminate flooring

Advantages

Responds quickly, easy to adjust up and down. With its low output, it can be laid directly under wooden floors, parquet and laminate. Low buildup and retrofit friendly.

Often used with

# TFV UNDERLAY BLUE

**Always follow the floor supplier's installation guidelines and ensure that the floor is indeed suitable for underfloor heating.**

Certain floor types have specific requirements for subfloor hardness. In these cases, it might be necessary to place a pressure distribution plate over the installed heating foil to meet the floor supplier's specifications.

UNDERLAY FOR TF HEATING FOIL

AREAS OF USE

- TFV underlay Blue for TF heating foil.
- High compressive strength. min. 40tons/400 KPA per sqm.
- Ideal for click laminate flooring.
- Reduces step noise in the room and improves the acoustic properties.
- Good thermal insulation - suitable for use on cold floors, e.g. in basements.
- Lower heating costs.

BUILD-UP

The surface must be clean and dry.

The underlay is insulating and made of extruded polystyrene with flame-retardant material. The underlay has several different properties that help to give the floor optimal performance and comfort.

	TECHNICAL DATA	
	Material	Extruded polystyrene
	Thickness	6mm
	Compressive strength	28 t/m²
	Density	55 kg/m³
	Impact sound according to ISO 10140	ΔLw = 23 dB
	Thermal conductivity	0,0307 W/mK
	Thermal conductivity (calculated value)	0,0341 W/mK
	Thermal resistance	0,187 m²K/W
	Operating temperature	-40°C - +70°C
	Melting point	> 160°C
	Thermal decomposition	> 250°C
	Water absorption	< 0,1 vol%
	Surface tension	> 42 mN/m
	Fire classification	E

UNDERLAY FOR TFP HEATING MAT

AREAS OF USE

- Underlay mat for TFP heating mat.
- Reduces step noise. Step noise with 17 - 19dB.
- Thickness 3mm.
- Density 60kg/m³.
- Deformation temperature 100°C.
- Operating temperature -40°C - 95°C.

BUILD-UP

The surface must be clean and dry.

The underlay is insulating and made of extruded polystyrene with airolen material. The underlay has several different properties that help to give the floor optimal performance and comfort.

## BATHROOMS

---

Heated floors provide optimal comfort in your bathroom. With a nice, even temperature, you can turn the bathroom into a small spa experience for body and soul. Let your bathroom be a source of quality time in your busy everyday life. We supply heating controls that let you remotely control the heat in the entire house, including the bathroom. In addition to making energy use more efficient with simple regulation and short reaction time, you may also prepare the bathroom with your mobile phone before you get home from work or holidays. No more cold bathroom floors!

VERSATILE AND SELF-ADHESIVE

ThermoFloor  
— smart heating solutions —

#### TECHNICAL DATA

Cable type	Twin conductor, screened
Rated voltage	230VAC 50Hz
Output pr. m <sup>2</sup>	60W + 100W + 130W + 160W
Thickness	Ø3.2mm
Width	0.5 meter
Length	2.0 - 24.0 meters
Cold lead	5 meters
IP Code	IPX7
Approvals	CE

#### RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA.

The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

#### AREAS OF USE

TF Sticky Mat can be installed underneath tiles, parquet, laminate, carpets, cork flooring and practically all other floors that are suited for floor heating.

TF Sticky2 may be placed directly on wooden floors.

#### FLOOR COVERING

Always install TF Sticky Mat in accordance with the installation manual. Please observe that in wet areas, a membrane should always be placed beneath the tile adhesive to ensure that only the tiles, tile adhesive and grout comes in contact with water.

# TF STICKY MAT

TF Sticky Mat is a low build-up, twin conductor grounded heating mat. The build-up ranges from 4 - 20mm depending on the underlay and floor covering. TF Sticky Mat has a heating cable (Ø 3,2mm) placed in a serpentine pattern on a fiberglass mesh, with 80mm space between the cables.

## Low buildup, self-adhesive heating mat

### Advantages

Can be placed directly on wooden floors.

Short center distance provides even heat distribution.

Easy to adapt to areas with obstacles and/or uneven shape.

**Buildup** 4 - 20mm, depending on underlay and covering.

Approvals	CE

RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA.  
The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

AREAS OF USE

TF SVK has numerous uses both indoors and outdoors.  
UV-resistant.

INDOOR FLOOR COVERING

- Parquet
- Laminate
- Carpet
- Linoleum
- Vinyl/PVC
- Tiles
- Other floor coverings suited for floor heating

OUTDOOR COVERING

- Concrete
- Pavers
- Use only 17W/m version for roof and gutters

TF SVK2 10/17W  
HEATING CABLE

TF SVK2 is a versatile twin conductor heating cable. It is an ideal solution for underfloor heating in poured floor constructions, both in traditional and low buildup floors. It may also be used for snow-melting installations, frost-proofing roof gutters and drains, frost-proofing pipes and keeping ground frost-free.

TF SVK heating cables are available in three different output versions: 10W/m and 17W/m, which are mainly used indoors, and 30W/m which is used outdoors. The heating cable has a UV-resistant outer jacket.

Heating cable for in-slab installations

Advantages

- Easy to install
- Low installation costs

**Buildup** No additional buildup, the cable is placed within the poured concrete construction.

NUMEROUS AREAS OF USE

# TF BVK 10W HEATING CABLE

TF BVK is a 3.5 mm heating cable that is suitable for low-rise floor constructions. The total construction buildup will in most cases be between 4 mm and 20 mm, depending on the surface and cover.

The sub-floor must be clean, smooth and primed. The BVK may then be laid down and adapted to the desired area. TF BVK is delivered in 10W/m and can be laid directly on wood, chipboards, concrete, etc.

ThermoFloor

A photograph of a snowy driveway with a clear path leading away from the viewer. The snow is piled high on either side of the path, and the path itself is dark and appears to be made of gravel or asphalt. The lighting is bright, creating strong shadows.

## OUTDOOR

---

Winter can present challenges with lots of snow and ice on the ground. With heat in the driveway, entrance area and walkway, you can avoid insecurity and injuries. Think about the safety of those you care about and install heating and heating controls outdoors. We offer heating control solutions adapted to outdoor use and snow melting automation. Control outdoor heating based on temperature and precipitation, and experience a safe and ice-free winter.

TFU2 HEATING CABLE MAT

Thermo-Floor offers several solutions for melting snow and ice. The TFU2 heating cable mat can withstand temperatures under installation up to 270°C, and it may be covered with hot asphalt without additional covering. This takes the response time down to a minimum, and eliminates the cost of covering the cables with aggregate. The TFU2 heating cable mat may also be installed underneath pavers or poured concrete. TFU2 can be used both for whole and partial covering of areas. The mat width is 50cm, which makes it very well suited for laying down in tire tracks on driveways etc.

The heating cable can be laid out to cover either part of or an entire area. The element width of 50cm makes it especially suitable for tire tracks for vehicles.

The TFU2 heating cable mat has a twin conductor cable with an output of 300W/m². TFU2 is available both for 230VAC and 400VAC.

# TF BHK HEATING CABLE

The TF BHK heating cable is used for concrete curing and preheating of concrete before pouring. It helps counteract temperature-related stresses in the concrete that can lead to cracking and delamination.

By using the TF BHK heating cable, the contractor saves time and money as the foundation itself is covered with winter mats. Typically, there's no need for large heaters or similar equipment to raise the temperature of the concrete base.

TF BHK concrete curing cable speeds up the hardening of the concrete, and the framework may be removed faster. Overall, this helps save time in the construction process.

AREAS OF USE

TF BHK is a heating cable used for curing and drying concrete. Can be used in all foundations, columns and supports.

COVERING

• Concrete

TF BHK concrete curing cable is used instead of additives in the concrete for faster curing.

Normally, the heat cable is cut after the concrete has finished curing.

# TF DEICING MAT

TF deicing mat is a heating cable mat commonly for thawing frozen ground and soil, melting snow and ice and curing concrete. Frozen pipes, snowy construction sites and frozen ground are common problems for many kinds of works in the cold season. The TF deicing mat thaws frozen ground fast, gently defrosts frozen pipes, and melts ice and snow anywhere. TF deicing mat may also be used for concrete hardening.

The TF deicing mat is made from reinforced PVC with a built-in armored heating cable and heat-resistant insulation. The deicing mat has 4 eyelets for fastening.

The deicing mat is connected via the supplied EURO plug and lead wire to a standard 230VAC outlet.

TF HEATING  
CABLE MAT

TF roof mat is a heating cable mat designed to prevent the build-up of snow and ice on roofs with internal drainage solutions by ensuring that the drains are kept open.

New and improved insulation in roof constructions has resulted in less heat loss from heating in all types of buildings, which overall is an advantage both for the environment and the individual. However, this means that the roof constructions are colder on the outside than they used to be, and because of this, larger amounts of snow and ice accumulate on the roof.

TF roof mat solves this problem by keeping internal drainage ice-free. The mat is placed underneath the roof covering around the drain, and may also be installed in gutters on the roof.

## SELF-LIMITING HEATING CABLES

Water that freezes can cause major damage. With self-limiting heating cables in combination with a thermostat, you can protect pipes, valves, drains and gutters from freezing. Thermo-Floor AS has a wide range of self-limiting heating cables with high output and low energy consumption, a good way of keeping your home and cabin safe from water damage through the winter months.

Consult your electrician

# TF SBG BLUE 2

## Heating cable in set lengths for frost protection water pipes

TF SBG Blue 2 is a food-approved (drinking water-approved) self-limiting heating cable for frost protection of water pipes. The heating cable can be laid on the outside or inside of water pipes. The cable is PVC-free and UV-resistant.

## Heating cable for drains and gutters

TF SBG-SW is a self-limiting heating cable for use as frost protection for drainage and sewage systems. The heating cable has a thicker outer sheath than most other self-limiting cables and can therefore withstand being in a "tougher" environment. TF SBG-SW is ordered by the meter. Maximum length is 135 meters on a 20A course at -10 ° C. A thermostat must always be used for regulation.

## DRAINPIPES

### TECHNICAL DATA

Outer sheath	Fluoropolymer
Grounding	Braided, tinted copper wire
Bus wire	Nickel plated copper
Rated voltage	230VAC
Output pr. meter	10W
	25W
Cross section	11.2 x 6.1mm
IP Code	IPX7
Approvals	CE

The heating cable may be cut to the desired length.

### RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA. The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

### AREAS OF USE

- Drainpipes, sewage, gutters
- Subsurface tanks and wells

# TF SBG-BR

## Heating cable for concrete constructions

TF SBG-BR is a self-limiting heating cable for use in concrete structures both outdoors and indoors.

## CONCRETE CONSTRUCTIONS

### TECHNICAL DATA

Outer sheath	Polyolefin
Grounding	Braided, tinted copper wire
Bus wire	Nickel plated copper
Rated voltage	230VAC
Output pr. meter	34W
Cross section	13.5 x 6.2mm
IP Code	IPX7
Approvals	CE

The heating cable may be cut to the desired length.

### RCD/THERMOSTAT

All heating cables must be equipped with a residual current disrupter with 30mA. The heating cable installation must be installed with an electronic thermostat for energy efficiency and temperature control.

### AREAS OF USE

- Steps and landings
- Walkways and driveways
- Underneath loading dock doors

# TF SBG-W

### Heating cable for maintaining water temperature

Modern hot water systems require an optimal water temperature every time you turn on the hot water. With the self-limiting heating cable SBG-W, you can get a system that is completely free of maintenance costs while at the same time being energy-saving. The heating cable is used in schools, hospitals, hotels and public buildings. The cable saves water since hot water is maintained in the water pipes, thus reducing both energy consumption and operating costs.

TF SBG-W should be used together with a thermostat that increases the water temperature to 65-70 ° C for thermal disinfection of piping.

## EXTREME CONDITIONS

# TF SBG-H

### Heating cable for extreme conditions

TF SBG-H is a self-limiting heating cable designed for use in high temperature environments. The heating cable is suitable for frost protection, but can also be used to maintain a constant temperature on pipes, taps and containers. Although the product has many uses, it is mostly used in the chemical and petrochemical industries. TF SBG-H is available in several effects. With a fluoropolymer outer sheath, better known as Teflon, the product is well suited for use with aggressive chemicals, oils, gasoline and diesel. The product is UV-resistant. TF SBG-H is approved for use in potentially explosive atmospheres and can be used at temperatures up to 200°C.

# SNOW MELTING AUTOMATION

Dry and ice-free all winter through. Snow melting automation on stairs and entrance areas, under asphalt, paving stones or tiles contributes to complete your home comfort. No maintenance, just easy and safe access all year round. With energy-efficient solutions you can choose the “green heating” outdoors, too.

Consult your electrician 

# Ice and snow-free areas, whenever and wherever.

With modern snowmelting automation and frost protection, there is no need to wait for spring. It comes whenever you decide. The Multireg IceControl Pro snow melting controller contributes to energy-efficient solutions with heating cables in the ground, and ensures snow and ice-free access all year round. Sanding and salting is a thing of the past - wear your slippers when going to your mailbox.

- Ground sensor with moisture and temperature sensor.
- Wall-mounted precipitation sensor.
- Gutter sensor.
- External air sensor.
- Control of up to two zones with the possibility of prioritizing between the zones.
- The system may be calibrated for optimal energy utilization and functionality.
- The system has the option of a signal input from the SD system (MODBUS 485).
- Input for external override.
- Output for external notification in the event of a malfunction.

**TF SVK2 30W HEATING CABLE**  
TF SVK2 is a versatile 2-wire heating cable. Used for snow-melting installations, frost-proofing roof, frost proofing pipes and keeping ground frost-free.

**TFU2 HEATING MAT**  
Outdoor heating mat for melting snow and ice. Withstands temperatures up to 270°C, and may be covered with hot asphalt without using aggregate, e.g.

**MULTIREG ICECONTROL PRO**  
Snow melting controller. Two outputs controls two independent zones. Developed to melt snow and ice on walkways, steps and other outdoor areas, as well as on roofs and in roof gutters.

ART. NO.	PRODUCT
54 301 77	Multireg IceControl Pro - snow melting regulator
54 301 71	IceControl ground sensor pocket
54 301 72	IceControl transformer 9V
54 301 73	IceControl wall bracket for rain and snow sensors
54 301 74	IceControl roof/gutter sensor TF TS2
54 301 75	IceControl ground sensor TF GS 15m cold lead
54 301 79	IceControl ground sensor TF GS 25m cold lead
54 301 76	IceControl air sensor TF AIS
54 301 78	IceControl precipitation/ rain- and snow sensor

The Multireg IceControl Pro must always be installed with an outdoor air sensor in addition to a ground sensor or a roof/gutter sensor.

# MULTIREG ICE CONTROL PRO

The Multireg IceControl Pro is a snow melting regulator for up to two heating zones. It is designed to melt snow and ice on the ground, on stairs, on roofs and in gutters. Multireg IceControl Pro is compatible with several types of ground- and air sensors. The regulator can be used for electrical heating systems.

When using snow melting automation, you can keep outdoor areas dry and ice-free throughout the winter. This contributes both to increased safety against accidents as well as saving you the effort of shoveling, sanding and salting. Ground sensors mounted in places where snow and ice problems normally occur gives you effective and energy-saving control of the heating cables. The sensors may be installed in concrete or asphalt, laid beneath pavers and tiles or in a roof gutter.

TECHNICAL DATA

Rated voltage	230VAC
Power consumption	Max 10VA
Contacts	2 potential free outputs
Relay	1 x 10A - for direct load
Size	213 x 93 x 100mm
Building height:	100mm Check the height in switchboard, and if necessary, adjust DIN-rail
DIN-rail	13 modules
IP Code	IP20
Approvals	CE

FEATURES

- Snow melting regulator
- Controls electrical heating
- Two outputs controlling two independent zones
- Ground sensor
- Roof/gutter sensor
- External air sensor
- Precipitation sensor
- Input for external override
- Output for external notification in the event of a malfunction
- MODBUS 485

A snow melting system should always include a thermostat, in order to regulate the system according to the current conditions. Multireg IceControl Pro has sensors that measure temperature and precipitation, which makes it a perfect choice for controlling outdoor heating. It includes options for external overrides and calibrations for most conditions, giving it excellent performance even on larger systems. With the favorable price and a user-friendly menu, it is also well suited for simpler installations.

**ICECONTROL  
GROUND SENSOR POCKET**  
Keeps the ground sensor straight and steady during installation. Easy to mount, and the pocket makes it possible to replace the sensor without stripping away the surface.

Placement	Outdoor areas
Internal diameter	Ø 55mm
Cross unit width	151mm

54 301 71

**ICECONTROL  
TRANSFORMER 9V**  
Required for connecting sensors in zone 2 of the Multireg IceControl Pro.

54 301 72

54 301 73 - Wall bracket only

**ICECONTROL  
WALL BRACKET AIR SENSOR/  
PRECIPITATION SENSOR**  
Mounting bracket for the IceControl precipitation sensor. Additional space for the IceControl air sensor TF AIS. Must be placed where the sensor is exposed to rain and/or snow  
**Mounting** Outdoors

54 301 74

**ICECONTROL  
ROOF/GUTTER SENSOR TF TS2**  
Mounted in the roof gutter, the sensor detects moisture. The information is sent to the Multireg IceControl Pro snow melting thermostat, which activates the heating cables if there is a danger of ice buildup. This sensor must be used in combination with an outdoor temperature sensor. NB! Must be connected to Zone 2 powered from the external transformer.

Placement	Roof, gutters and drains
Ambient temp.	-20°C - 70°C
Size (HxWxD)	12.8 x 165 x 21mm
Fan size (W)	107mm
Lead	4 meters
Voltage	9V
IP Code	IP68

54 301 75  
54 301 79

**ICECONTROL  
GROUND SENSOR TF GS**  
Detects moisture and temperature. The ground sensor is placed within the area to be heated, somewhere where it is exposed to precipitation. It measures both temperature and humidity at the site and sends the information to the Multireg IceControl Pro snow melting thermostat.

Placement	Outdoor areas
Ambient temp.	-20°C - 70°C
Size (HxØ)	35 x 55mm
Lead	15m + 25m
IP Code	IP68

The product must be cleaned at least every autumn.

54 301 76

**ICECONTROL  
OUTDOOR AIR SENSOR TF AIS**  
Outdoor sensor for exact temperature measuring.  
NTC 10 kΩ @ 25°C

Cable lead-through	M16 x 1.5
Temperature area	-50°C - 50°C
IP Code	IP54

Mount the sensor on the north side of the building

54 301 78

**ICECONTROL  
PRECIPITATION/ RAIN-AND SNOW  
SENSOR**  
Device for detecting precipitation as either rain or snow. A connectible heating function prevents the formation of ice or dew and helps the device to dry faster. NB! Must be connected to Zone 2 powered from the external transformer.

Placement	Outdoor areas
Voltage	9 VDC / VAC + 10%
Size (LxWxH)	75 x 69 x 44 mm
Cable inlet	M16 x 1.5
IP Code	IP65

# MULTIREG DIN±

Multireg DIN± is a thermostat specifically designed to control heating cables in gutters, steps, walkways, driveways etc. where ice buildup may occur. The thermostat may also be used for frost protection of water pipes.

### FUNCTION 1: DIN± THERMOSTAT

Ice buildup happens within a certain temperature interval, and by using outdoor heating cables, this ice formation may be counteracted. Multireg DIN± is designed to control the heat supply only within the critical area, in order for defrosting to be achieved using a minimum of power. The critical temperature range varies from one installation to another, hence the thermostat is equipped with a start and stop temperature setting. The thermostat is placed indoors, e.g. in a fuse box, while the sensor is placed outside, e.g. on a wall. After a few adjustments, the thermostat is set to a temperature interval where no ice or icicles are formed, and the installation runs itself with minimal energy consumption.

MULTIREG

### TECHNICAL DATA

Rated voltage	230VAC 50/60Hz
Max. load	3600W/16A (resistive load)
Width	2 modules – DIN-rail
Power consumption	~0,5W
Power regulator	Time cycle 0 - 30 min
Ambient temperature	-30°C to 60°C
Temperature range	-30°C to 10°C
Hysteresis	±0.5°C
Sensor values	10°C 18.6kΩ 15°C 15.1kΩ 20°C 12.2kΩ 25°C 10.0kΩ
Included in package	Floor sensor Art. no. 54 301 07 Plastic cover for wall
Size	89 x 32 x 62mm
IP Code	IP20
Approvals	CE

### FEATURES

- Roof gutter thermostat
- External outdoor sensor
- Power regulation 0 - 100%

### FUNCTION 2: POWER REGULATOR

By connecting terminals 1 and 2 (REG) using a jumper wire, the Multireg DIN± will act as a power regulator. This function works well for frost protecting water pipes. Set the desired temperature for when the system should switch on. Customize the output as needed.

ART. NO.	PRODUCT
54 301 66	Multireg DIN± thermostat 3600W 16A
54 301 76	IceControl air sensor TF AIS

### ICECONTROL OUTDOOR AIR SENSOR TF AIS

Outdoor sensor for exact temperature measuring.  
NTC 10kΩ @ 25°C

Cable lead-through M16 x 1.5  
Temperature area -50°C - 50°C  
IP Code IP54

# HOW TO PREVENT DAMAGING YOUR FLOORS

**Most people will regard their home as their most significant investment, and naturally want to secure it as best as possible against damage of various kinds. It is therefore imperative to follow all existing guidelines and safety regulations when the home is to be built or upgraded. Always use an authorized installer.**

## Underfloor heating in different types of floors

- Consideration must be given to what the floor is to be covered with when choosing a heating product. Always research in advance which type of floor is most suitable to your needs, so that your electrical installer can help you select the right heating product.
- Only use products intended for underfloor heating. If you choose a parquet, you must be extra careful to check that the parquet can withstand underfloor heating. Some types of flooring are not recommended in combination with underfloor heating.
- In cases where the heating cables are installed in a poured construction, this compound must be fully hardened before the heating cables are turned on.
- The heat must then be gradually increased, giving the materials time to adapt.

## Using the thermostat

- All underfloor heating systems must be connected to an electronic thermostat, allowing the heat to be regulated.
- The thermostat must always be operated in accordance with

the supplier's instructions.

- Read the thermostat installation guide carefully in order to choose the setting that best suits your needs.

## Covering

- In all rooms with underfloor heating, you must avoid placing heat-insulating objects on the floor, as this can lead to overheating and damage to the heating product and the covering. This applies, for example, to carpets with a rubberized underside, beanbags and furniture where the underside rests directly on the floor (without legs or kickboards with ventilation).
- In rooms with underfloor heating, smaller heat-insulating elements (e.g., packs of diapers or piles of clothes) must also not be stored directly on the floor.
- Fixtures and heat-emitting products must be placed in heat-free areas.

## Avoid damage

- Avoid drilling, fixing bolts etc. in floor with heating cables. If you are going to do any of this, contact your electrician who can help you locate the heating cables.
- Avoid using a lot of water when cleaning the floor. Should you be unfortunate enough to spill, wipe up as quickly as possible. In the event of significant accidents and water leaks, the underfloor heating must be turned off immediately. Allow the floor to dry thoroughly before attempting to turn it back on.
- If the earth fault circuit breaker trips, contact your electrician.
